

Single Mode Laser Module

14-pin Package up to 500mW c.w. @ 760nm - 1550nm
custom wavelengths on request

Description:

The Lumics single mode laser module contains an optimized GaAs substrate based quantum well high power laser diode. It has been designed for customer specific applications and is available with special FBG's and fibers. The extremely stringent reliability requirements are achieved through our patent pending innovative technology. This includes careful design, exactly defined manufacturing and extensive testing. The qualification contains a set of optoelectronic, thermal and mechanical tests. Each laser diode module is individually serialized for traceability and is shipped with a specified set of test data.

Features & Functions:

- Single mode pigtail
- Cooled 14pin package
- Telcordia compliant package
- RoHS compliant

Options:

- FBG-options
- PM-fiber
- Low rise <1 ns
- Narrow and ultranarrow linewidth
- Connector incl. 900µm protection tube

Benefits:

- All laser welded
- Field proven reliability
- Hermetic sealing

Applications:

- Sensor applications
- Analytical instruments
- Pumping and seeding
- Printing

Module Drawing (Dimensions in mm)

Pin Connections

Pin	Function	Pin	Function
1	Cooler (+)	8	(*) LD Cathode (-)
2	Thermistor	9	(*) LD Anode (+)
3	PD Anode (+)	10	LD Anode (+)
4	PD Cathode (-)	11	LD Cathode (-)
5	Thermistor	12	nc
6	nc	13	Case ground
7	nc	14	Cooler (-)

(*) Optional low inductive

We manufacture diode lasers.

Typical laser specifications at 25°C (*)

Wavelength at Pop [nm]	max. Power, c.w. [mW]	Peak Pulse Power[mW]
760	200	400
790	250	550
808	250	550
850	200	550
915	300	1000
975	500	1200
1030	300	1000
1064	450	1200
1080	300	1000
1100	200	600
1550	150	200

other wavelengths on request

Parameter	Symbol / Conditions	Min	Typ	Max	Unit
Rise and fall time (5)			2		nsec
Spectral width (FWHM) (3)	$\Delta \lambda$ / at P_{op} , without FBG	0.05	multiple peaks, 0.1	<1	nm
Spectral width (FWHM) (4)	$\Delta \lambda$ / at P_{op} , with FBG only	0.05	0.08	0.5	nm
For 1550 nm:					
Spectral width (FWHM) (3)	$\Delta \lambda$ / at P_{op} , without FBG		6		nm
Spectral width (FWHM) (4)	$\Delta \lambda$ / at P_{op} , with FBG only		0.8		nm
Optical power stability	P_{op}/t / at I_{op} , t = 60 sec			0.5	%
Side mode suppression (3)	at P_{op} , with FBG		20		dB
Monitor responsivity	R	0.1	1	20	$\mu A/mW$
Monitor dark current			5	40	nA
TEC current	I_{TEC} / chip 25°C, case 70°C		1.1		A
TEC voltage	V_{TEC} / chip 25°C, case 70°C		1.9		V
Thermistor resistance	R_{th} / T=25°C	9.5	10	10.5	kOhm
Large signal modulation bandwidth			200		MHz

Fiber Specifications

Fiber type	single mode or PM fiber (Polarization extinction ratio min. 6 dB (2))
------------	---

Notes:

- 1) Ensure sufficient protection against high energy back reflection pulses from solid state lasers. High energy back reflection damages the diode (for example stimulated Brillouin scattering). Typical damage threshold for 8ns puls @200KHz is 0.05 μ J (this level is not covered under warranty).
- 2) Intensity noise of light from modules with PM fiber after polarizer increases with lower polarization extinction ratio (example 6/10/13 dB can result in intensity noise as high as 50/20/5 %). The intensity noise is sensitive to varying stress (by mechanical and temperature effects) introduced to the PM fiber.
- 3) Wavelength is measured in air. Without wavelength stabilisation by a fiber bragg grating(FBG) multiple peaks (side modes) around the average wavelength for a specific current in a range of (1-3) nm are observed. The full width have maximum (FWHM) of those peaks can suddenly narrow or broaden. Side mode suppression counts the first side peaks next to the main peak. A peak is defined by significant lower values left and right to this peak.
- 4) With wavelength stabilisation by a fiber bragg grating (FBG) a single peak for a specific current is observed. The full width half maximum (FWHM) of this single peaks is stable over time as long as it is not disturbed by further back reflection from the outgoing optical path.
- 5) Rise and fall times depend on appropriate driver and can be lower than 1ns with the low inductive version.

General Parameters / Accessories

Parameter	Symbol	Min	Typ	Max	Unit
Storage Temperature	T_S	-10		55	°C
Internal operating * and (Ambient) temp , c.w.-operation **	T_{op} c.w.	10(5)		35(40)	°C
Humidity / Non-condensing Atmosphere				90	%
Thermal heat sink resistance				0.1	k/W
Maximum fiber flange temperature				50	°C
Weight					g
Compliance			CE, ROHS		

Further Options (Please ask for quotation if needed)

Optical fiber patchcord, Laser diode drivers for each individual wavelength, Interface cable , OEM laser diode driver and temperature controller

* taken at internal temperature sensor ** we recommend to operate the laser above dew point. Below dew point water condensation on the exit window may damage the window when laser is switched on. If the module was stored below dew point before operation dry the window by pre-heating the module to 25°C

User Safety

Important Note Read and carefully follow operating manual instructions. Especially, whenever power supply is switched on or off, always disconnect from laser module. See manual for details. Uncontrolled on / off switching may cause spikes and result in fatal device damage. This product is not certified by with IEC 60825-1 or 21CFR1040.10/ 21CFR1040.11 and must comply with the applicable regulations by the Purchaser if sold as laser product.
